

## Software Management System

Our proposal is for a software management system. It will keep track of cd keys, ISO files, exe files, and information pertaining to software in a SQL database. You will have to log in to the software using a username and password. This will allow only the software that you own or have access to, to be shown as well as being able to customize the GUI. On the main page, you will be able to search for and select a particular piece of software, and then in a new window will be able to edit the data that is saved in the database. They will also be able to mount the ISO, or run the EXE, and install the program. This program will use datatables, menus, background workers, SQL, and we could even use some LINQ. I did a very quick representation of what it could look like in WPF, but this is just an initial sketch. We can add as many GUI features as you would want, we just need to know how much more you would like us to implement. Thanks!

Software	Category
Dragon Naturally Speaking 13	Nuance
OneNote 2013	Microsoft
Office 2010 Home and Business	Microsoft
Virtual Clone Drive (VCD)	SlySoft
Visual Studio Ultimate 2013	Microsoft

Name: Office 2010 Home and Business Category: Microsoft ▼

CD Keys:

6FDRJ-38MY9-KYX8G-6YG8Y-BQB9R

Notes:

the email said it was upgraded to pro? but they gave us a home cd key; Email techsupport@bargainsoftwareshop.com for help. Order number was 12647
